

BICYCLE DISC BRAKE PADS CATALOG

Vesrah®

MADE in JAPAN

About Vesrah®

Vesrah has been at the forefront in the field of highly competitive motorcycle brake manufacturing for over 60 years. Now, cyclists everywhere are able to enjoy Vesrah Brake Pads' outstanding performance on their bicycles. All of our accumulation and experience of brake manufacturing technology and valuable know-how in our motorcycle racing have been condensed and poured into these bicycle pads. Vesrah friction materials are designed to respond reliably to every anticipated riding condition to provide you, bicycle riders, with stable high-performance. Our wide range of material selection will satisfy YOU, no matter what your riding style is: relaxed, recreational to high-intensity/competitive racing. We proudly present these Vesrah brake pad friction materials, backed by Japanese manufacturing.

Safety and Enjoyment

"Instinctive Braking Control" This is Vesrah's ultimate concept of an Ideal Brake System. The system lets you respond safely and intuitively, depending on your encounters with various riding conditions: keeping you safe and in control, not something you need to work hard to acquire.

Brake systems that are merely strong and powerful make you conscious and awkward: you need to learn and to be deliberate every time you brake. This takes your attention away from many important factors, such as surface conditions, selecting cornering paths, other bikers' locations, etc. and force you to miss the best timing for braking.

"Instinctive Braking Control" will let you experience natural and safe riding in tense and hard racing as well as relaxed, recreational biking.

Vesrah brake friction materials contain organic, metal, ceramic components. These individual components are mixed by calculated and careful adjustments. These mixtures of components, in all sorts

of proportions, are based on their properties and characteristics, so that the final friction material will produce the characteristics that we — and you — are looking for. Our 60 years' experience and accumulated know-how comes into play. We continue to pursue our ultimate brake pads with "Instinctive Braking Control" .

Performance Characteristics

Trail

Universally applicable entry level-pads. Recreational riding on street and/or hilly countryside riding. Effective and comfortable initial braking power. Brakes of this class are successfully used in sports-type to power-assisted bicycles.

DownHill

Powerful performer with less noise. Most controllable on high temperature without fade. Japanese DH champion rider chooses it.

CrossCountry

Linear response. Speed reduction responding to brake lever squeeze. Control your speed according to course conditions, leading to your victory.

Trial

The most powerful braking power even at lower temperatures. This is "MUST" for trials.

CrossCountry-SL

Weight is less than a half of CrossCountry pads. Back plate is of Aeronautic grade Aluminum (identical friction material as CrossCountry).

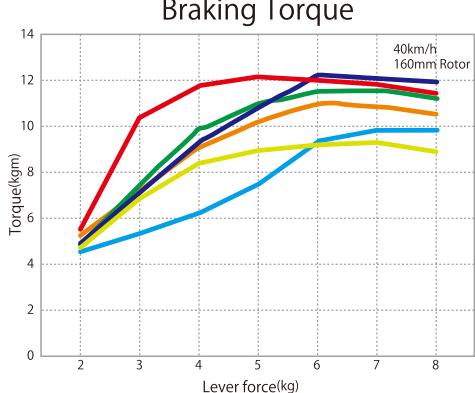

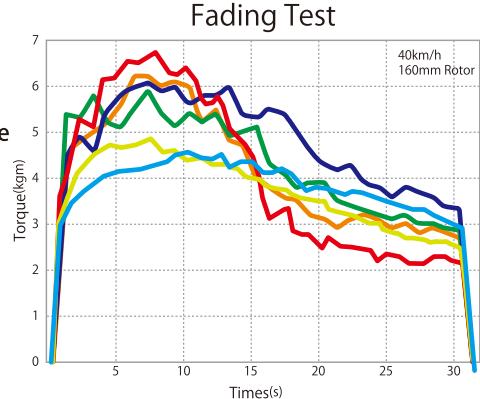

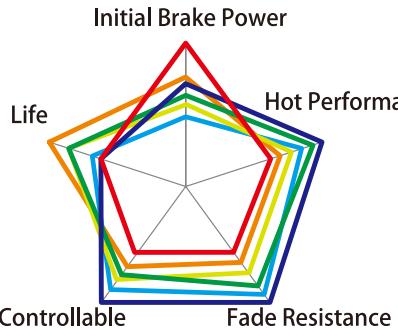

Road

Smooth control on high speed. Reliable brake control in any conditions. Noise free.

Cyclo Cross

Maintain the same effective speed control even your brake grip weakens during exhaustive road cross racing. You concentrate to the finish line.
